

NON-BINDING DECLARATION RECOMMENDATION:

Pork (97%), drinking water, nitrite curing salt (table salt, preservative: E252), stabiliser: E450; antioxidant: E301; glucose syrup, honey flavouring (< 0.01%)

Recipe ID: 1323

* All compound foods and ingredients used must be labelled with those of the respective manufacturer in addition to our information.

Honey Ham AF

-with Phosphate-

INGREDIENTS:

100 kg	Top and bottom cuts, without fat and rind	
17.22 kg	Drinking water (with ice if necessary)	
2.28 kg	Nitrite curing salt (salt content of 1.9% in the final product)	
0.5 kg	Nuba-Kombi-Lak Special P with Honey Flavour CL/AF	Art. No. 422100

PROCESSING:

Cut the top and bottom of ham without fat and rind. Completely dissolve the Nitrite curing salt in cold drinking water (add ice if necessary). Then stir in Nuba-Kombi-Lak Spezial P with Honey Flavour CL/AF. Inject the trimmed ham pieces with 2 x 10% brine (based on the weight of the meat). Place the injected ham pieces, along with any remaining brine, into the tumbler. Tumble the ham pieces for 12 - 15 hours under vacuum at intervals at 2 - 4 °C (target tumbling intensity 3500 - 5000 revolutions). Then immediately place the ham pieces in ham moulds, press firmly and blanch at 70 - 75 °C to a core temperature of 70 °C, cool briefly with tempered water, allow to steam off and cool thoroughly in the cold store.

OR stuff into ham casings, par-cure at 56 - 58 °C for about 45 minutes, dry for 30 - 40 minutes, smoke at approx. 56 °C to the desired smoke intensity, and blanch at 70 - 75 °C to a core temperature of 70 °C, cool briefly with tempered water, allow to steam off and cool thoroughly in the cold store.

ATTENTION:

Do not press the ham again after cooking!

Taste • Tradition • Technology

This recipe has been developed in all conscience, but as the implementation is out of our influence, we can't give guarantees.
